History of the English Landed Interest: Modern period Russell Montague Garnier 1893

New Points in the History of Roman Britain, as Illustrated by Discoveries at Warwick Square, within the City of London Alfred Tylor 1884

An Age of Transition? Christopher Dyer 2005-02-03 This significant new work by a prominent medievalist focusses on the period of transition between 1250 and 1550, when the wealth and power of the great lords was threatened and weakened, and when new social groups emerged and new methods of production were adopted. Professor Dyer examines both the commercial growth of the thirteenth century, and the restructuring of farming, trade, and industry in the fifteenth. The subjects investigated include the balance between individuals and the collective interests of families and villages. The role of the aristocracy and in particular the gentry are scrutinized, and emphasis placed on the initiatives taken by peasants, traders, and craftsmen. The growth in consumption moved the economy in new directions after 1350, and this encouraged investment in productive enterprises. A commercial mentality persisted and grew, and producers, such as farmers, profited from the market. Many people lived on wages, but not enough of them to justify

describing the sixteenth century economy as capitalist. The conclusions are supported by research in sources not much used before, such as wills, and non-written evidence, including buildings. Christopher Dyer, who has already published on many aspects of this period, has produced the first full-length study by a single author of the 'transition'. He argues for a reassessment of the whole period, and shows that many features of the sixteenth, seventeenth, and eighteenth centuries can be found before 1500.

The World Tin Market William Lee Baldwin 1983 William L. Baldwin argues that while the structure, conduct, and performance of the world tin industry are subject to strongly competitive market forces, major intervention by international governments has exerted a controlling influence over the world tin market for the past sixty years.

The Iron Age 1916

The Oxford Handbook of Roman Britain Martin Millett 2016-09-01 This book provides a twenty-first century perspective on Roman Britain, combining current approaches with the wealth of archaeological material from the province. This volume introduces the history of research into the province and the cultural changes at the beginning and end of the Roman period. The majority of the chapters are thematic, dealing with issues relating to the people of the province, their identities and ways of

life. Further chapters consider the characteristics of the province they lived in, such as the economy, and settlement patterns. This Handbook reflects the new approaches being developed in Roman archaeology, and demonstrates why the study of Roman Britain has become one of the most dynamic areas of archaeology. The book will be useful for academics and students interested in Roman Britain.

Malaysia in the World Economy (1824-2011) Azlan Tajuddin 2012-06-14 From colonialism to independent statehood, the extent of Malaysia's capitalist development has been dramatically limited by its position in the world economy. This book combines macro- and micro-theoretical approaches in analyzing the relationship between capitalist development in Malaysia within a comparative-historical and world-systemic context.

The International Tin Trade Peter Roddy 1995-06-30 A practical and authoritative book covering every aspect of the tin trade beginning with its origins and history including the traumatic events of 1985 and their aftermath, and going on to deal with the mining and production processes. Aspects of the trading process are covered including trading techniques and strategies in both physical and futures markets.

A Concise History of Bolivia Herbert S. Klein 2003-02-03 In its first Spanish edition, Herbert Klein's *A Concise History of Bolivia* won immediate acceptance within Bolivia as the new standard history of this important nation. Surveying Bolivia's economic, social, cultural, and political evolution from the arrival of early man in the Andes to the present, this current version brings the history of this society up to the present day, covering the fundamental changes which have occurred since the National Revolution of 1952 and the return of democracy in 1982. These changes have included the introduction of universal education and the rise of the mestizos and Indian populations to political power for the first time in national history. Containing an updated bibliography, *A Concise History of Bolivia* remains an essential text for courses in Latin American history and politics.

Tin in Antiquity R.D. Penhallurick 2023-04-21 'Tin in Antiquity' is the first comprehensive history of the early metallurgy of tin, a mine of information on this rare, highly prized metal so vital to the developing civilization of the Bronze Age. The origins of tin have always been a mystery, but the author has unearthed archaeological evidence from all over the world to trace the tinfields used before the discovery of European deposits. He takes us on a fascinating voyage of discovery through the Ancient World, delving into mythology, and enlivening his scholarly text with quotations from the Classics and humorous anecdotes. As his name suggests, Roger Penhallurick's roots are deep in Cornwall- formerly the world's largest tin producer, and still the greatest in Europe. So it is fitting that the Cornish section comprises almost half the book, for the first time collecting together all the evidence for tin streaming between 2000 BC and AD 1000. All surviving artifacts recovered from the tin workings are illustrated and put in their archaeological context. The book is lavishly illustrated throughout, including many rare old photos, and has a full bibliography of the wealth of sources that have contributed to this work.

The History of Mining Michael Coulson 2012-11-12 THE INDUSTRY THAT FORGED THE MODERN WORLD Throughout history metals and raw materials have underpinned human activity. So it is that the industry responsible for extracting these materials from the ground - mining - has been ever present throughout the history of civilisation, from the ancient

world of the Egyptians and Romans, to the industrial revolution and the British Empire, and through to the present day, with mining firms well represented on the world's most important stock indexes including the FTSE100. This book traces the history of mining from those early moments when man first started using tools to the present day where metals continue to underpin economic activity in the post industrial age. In doing so, the history of mining methods, important events, technological developments, the important firms and the sparkling personalities that built the industry are examined in detail. At every stage, as the history of mining is traced from 40,000BC to the present day, the level of detail increases in accordance with the greater social and industrial developments that have played out as time has progressed. This means that a particular focus is given to the period since the industrial revolution and especially the 20th century. A look is also taken into the future in an effort to chart the direction this great industry might take in years to come. Many books have been written about mining; the majority have focused on a particular metal, geographical area, mining event or mining personality, but 'The History of Mining' has a broader scope and covers all of these essential and fascinating areas in one definitive volume.

locations in Europe and sub-Saharan Africa. It explores the organisation of the industry at this time, the reversal of the contemporary specie flow and the distribution of these precious metals throughout Europe and to lands beyond the bounds of that continent. It also describes the beginnings of autonomous European base metal - lead, copper, tin and mercury production, the organisation of the onewo industry, its levels of output and the distribution of these metals to new groups of European consumers. Tin Mining in Malaysia, 1800-2000 David Palmer 2011

History of the English Landed Interest Russell Montague Garnier 1892

Beyond the Tin Mines Francis Kok-Wah Loh 1988 In the 1880s, an estimated 4,000 people lived in the Kinta District of Malaya. Twenty years later, with the discovery of tin deposits, the population had increased to 123,000, comprised mainly of Chinese immigrants who found employment as coolies in the open-cast mines. Although the tin industry was gradually brought under the control of the British colonial government, the lives of the workers largely remained beyond its reach. This study of the Chinese working people in Kinta over a 100-year period explores how their lives have been affected by these changes and how they have adjusted in order to meet the challenges posed by changing situations.

Beyond the Medieval Village Stephen Rippon 2008-11-27 The varied character of Britain's countryside and towns provides communities with a strong sense of local identity. One of the most significant features of the southern British landscape is the way that its character differs from region to region, with compact villages in the Midlands contrasting with the sprawling hamlets of East Anglia and isolated farmsteads of Devon. Even more remarkable is the very 'English' feel of the landscape in southern Pembrokeshire, in the far south west of Wales. Hoskins described the English landscape as 'the richest historical record we possess', and in this book Stephen Rippon explores the origins of regional variations in landscape character, arguing that while some

landscapes date back to the centuries either side of the Norman Conquest, other areas across southern Britain underwent a profound change around the 8th century AD.

Roman and Medieval Exeter and their Hinterlands Stephen Rippon 2021-03-23 This first volume, presenting research carried out through the Exeter: A Place in Time project, provides a synthesis of the development of Exeter within its local, regional, national and international hinterlands. Exeter began life in c. AD 55 as one of the most important legionary bases within early Roman Britain, and for two brief periods in the early and late 60s AD, Exeter was a critical centre of Roman power within the new province. When the legion moved to Wales the fortress was converted into the civitas capital for the Dumnonii. Its development as a town was, however, relatively slow, reflecting the gradual pace at which the region as a whole adapted to being part of the Roman world. The only evidence we have for occupation within Exeter between the 5th and 8th centuries is for a church in what was later to become the Cathedral Close. In the late 9th century, however, Exeter became a defended burh, and this was followed by the revival of urban life. Exeter's wealth was in part derived from its central role in the south-west's tin industry, and by the late 10th century Exeter was the fifth most productive mint in England. Exeter's importance continued to grow as it became an episcopal and royal centre, and excavations within Exeter have revealed important material culture assemblages that reflect its role as an international port.

The Gwithian Landscape: Molluscs and Archaeology on Cornish Sand Dunes Thomas M. Walker 2018-03-31 Gwithian, on the north coast of Cornwall, is a multiperiod archaeological site. The present work explores the palaeoenvironment of the area around the settlement sites, from the Neolithic, when sand dunes initially developed in the Red River valley, to the present post-industrial landscape.

Mining and Metal Production Through the Ages Paul T. Craddock 2003 This volume grew out of the proceedings of an international conference on the Prehistory of Mining and Metallurgy hosted by The British Museum in 1995. The original papers are augmented by the inclusion of participants' more recent work and additional contributions by other leading experts in the field.

The International Tin Cartel John Hillman 2010-02-25 For most of the twentieth century, tin was the site of new forms of international regulation which became a model for other commodities. The onset of the depression of the 1930s saw a collapse in commodity prices, and governments of tin producing countries decided to form a cartel to return the industry to comparative prosperity. This is a detailed study of how the tin industry found itself in difficulty and how the cartel developed its policies of control over production and stocks, together with its enduring legacy after World War II. This study of a cartel brings together two levels of analysis that are normally kept separate; international cooperation, and national organization, and demonstrates how each affected the other. It is based on a comprehensive review of a wide range of archival sources which are sufficiently rich and frank that they provide an insider's sense of how a cartel actually worked.

At the Hands of Fate: the Political Economy of Islamic Insurance Muhammad Sigit Andhi Rahman 2020-04-02 Why have Islamic insurance systems developed well in some countries, but not in others? Malaysia is considered as Islamic insurance elite due to its relatively large number of operators it houses as well as the sustained growth of Islamic insurance

sales within the country, while Indonesia and Pakistan are still in early stages of development. Analyzing the political and social history of Islamization of insurance systems in these three Muslim majority countries in Asia since 1980s, this book demonstrates the development gap between these countries on Islamic insurance results from; firstly, complex bargains made between various groups within each country polity, and those bargains are structured by the country's fundamental political institutions. Secondly, the gap is also an outcome of different societal transformations during the Islamization that 'produce Islam(s)' in these countries. The revival of Islamic principles in these countries does not only create Sharia-compliant financial products but produces Islamic norms, identities, ethics, and practices enacted in the way the communities manage their risk.
