**Powered by Porsche - the alternative race cars** Roy P Smith 2021-10-13 Powered by Porsche - the Alternative Race Cars is a thorough and fascinating account of the racing cars that were powered by Porsche engines, but where the chassis and development of the car was carried out by others. The Porsche company in Zuffenhausen, Germany, can probably be said to be the most successful marque ever for victories in the motor racing scene. Likewise many firsts in innovation have come with the name Porsche attached. Many major racing car

producers such as Elva, Lotus, Lola, or March, as well as many smaller independents, at some time featured a Porsche engine in their chassis. Demand for the services and supply of cars, chassis, and parts from Porsche, often outstripped their ability to deliver during the late '70s to early '80s. With many new projects in the rapidly expanding Porsche organisation, race car projects had to be prioritised. This would lead to the creation of the replicas, as opposed to the factory-built works race cars, and even Porsche was building 'replica' 935s to supply to clients, continuing into the 962 era. In turn, a whole new, highly specialised, high quality industry grew up to meet the demand for Porsche-powered racers. In this fascinating book we meet the racing cars, the teams and the people who turned to Porsche to utilise the power from, perhaps, the greatest of all engine makers. This is thought to be first book on the subject, covering the entire history of Porsche engines, detailed engine specifications, non-Porsche chassis, and race details, as well as team histories with anecdotes from drivers. It is illustrated with many previously unpublished photos, and provides fascinating reading for all racing fans, as well as Porsche enthusiasts.

**Ford Total Performance** Martyn L. Schorr 2015-09-10 Follow Ford's leap into the 1960s and the performance era--on the streets and on the track! In the early 1960s, Ford Motor Company underwent a dramatic change in corporate philosophy. Previously, under Ford's young chairman, Henry Ford II ("the Deuce") safety, not performance, was the goal. But by 1962, even the chairman realized his philosophy needed to change. Ford was nearly invisible to car-crazy baby boomers. Lee Iacocca convinced Ford that he needed to act decisively or risk losing the emerging youth market to the competition. Thus began Ford's "Total Performance" program. Ford Total Performance is all about Ford's prime racing era from 1961 through 1971. In addition to purpose-built race cars, it also covers production performance cars, specialty models, and unique concepts such as lightweight drag race cars. The book explores the 427 Fairlane Thunderbolt; Mercury Comet; unique V-8 Falcons that competed in the 1963 and 1964 Monte Carlo Rallies; Dick Brannan's 427 A/FX drag car; Ford Indy 500 winning race cars; 427 Overhead Cam SOHC 427 engines

as used in A/FX and fuel race cars; Boss 302 and 429 Mustangs for street, drag racing, and Trans-Am; and many more. The Ford-Ferrari war that led to the creation of the legendary GT40 Le Mans race cars isn't forgotten. Featuring unpublished period photographs, plus photos and artwork from Ford designers, Ford Total Performance covers all of Ford's classic race and street cars, including Cobras and Shelby Mustangs. It's a must-have book for any fan of classic American performance cars!

**Race Cars** Ian Graham 2008 Have you ever wanted to drive a race car? This new edition of 'Race Cars' looks at how the fastest cars on the track are designed, built, and driven. Lined up for inspection are the V8 NASCAR stock cars, the Audi R10 Le Mans sports car, the caged-in supercharged Top Fuel Dragsters. Take a closer look at the McLaren MP4-22 and what its Formula 1 team does to keep it on top. Start your engines. The revised and updated 'Designed for Success' series shows how designers create the very best cars, planes, motorcycles, and other exciting vehicles. It explains the many design challenges that designers and engineers must overcome and the factors they must take into account, such as materials, cost, and new technology.

**The Science of Car Racing** Karen Latchana Kenney 2014 "Describes the science concepts involved in several types of car racing"--

Science of Race Cars: Studying Forces and Motion Karen Latchana Kenney 2016-01-01 In this engaging title, young readers learn about the moving form of energy that is motion! The relationship of mass and acceleration is explained, as are the forces of downforce, updraft, friction, inertia, centripetal force, and the role of aerodynamics in managing these forces. These properties are illustrated by the running of car races. Colorful infographics make internal combustion, mass and acceleration, and centripetal force easily accessible, and prominent contributors such as Junior Johnson and Sir Isaac Newton are featured. A fun experiment with friction brings the science of motion to life! Aligned to Common Core Standards and correlated to state standards.
