*Transforming the Future (Open Access)* Riel Miller 2018-04-27 People are using the future to search for better ways to achieve sustainability, inclusiveness, prosperity, well-being and peace. In addition, the way the future is understood and used is changing in almost all domains, from social science to daily life. This book presents the results of significant research undertaken by UNESCO with a number of partners to detect and define the theory and practice of anticipation around the world today. It uses the concept of 'Futures Literacy' as a tool to define the understanding of anticipatory systems and processes - also known as the Discipline of Anticipation. This innovative title explores: • new topics such as Futures Literacy and the Discipline of Anticipation; • the evidence collected from over 30 Futures Literacy Laboratories and presented in 14 full case studies; • the need and opportunity for significant innovation in human decision-making systems. This book will be of great interest to scholars, researchers, policy-makers and students, as well as activists working on sustainability issues and innovation, future studies and anticipation studies. *The Palgrave Encyclopedia of Urban and Regional Futures* Robert C. Brears 2023-01-13 While urban settlements are the drivers of the global economy and centres of learning, culture, and innovation and nations rely on competitive dynamic regions for their economic, social, and environmental objectives, urban centres and regions face a myriad of challenges that impact the ways in which people live and work, create wealth, and interact and connect with places. Rapid urbanisation is resulting in urban sprawl, rising emissions, urban poverty and high unemployment rates, housing affordability issues, lack of urban investment, low urban financial and governance capacities, rising inequality and urban crimes, environmental degradation, increasing vulnerability to natural disasters and so forth. At the regional level, low employment, low wage growth, scarce financial resources, climate change, waste and pollution, and rising urban peri-urban competition etc. are impacting the ability of regions to meet socio-economic development goals while protecting biodiversity. The response to these challenges has typically been the application of inadequate or piecemeal solutions, often as a result of fragmented decision-making and competing priorities, with numerous economic, environmental, and social consequences. In response, there is a growing movement towards viewing cities and regions as complex and sociotechnical in nature with people and communities interacting with one another and with objects, such as roads, buildings, transport links etc., within a range of urban and regional settings or contexts. This comprehensive MRW will provide readers with expert interdisciplinary knowledge on how urban centres and regions in locations of varying climates, lifestyles, income levels, and stages development are creating synergies and reducing trade-offs in the development of resilient, resource-efficient, environmentally friendly, liveable, socially equitable, integrated, and technology-enabled centres and regions.

*Anticipation, Sustainability, Futures and Human Extinction* Bruce E. Tonn 2021-05-16 This book considers the philosophical underpinnings, policy foundations, institutional innovations, and deep cultural changes

needed to ensure that humanity has the best chance of surviving and flourishing into the very distant future. Anticipation of threats to the sustainability of human civilization needs to encompass time periods that span not just decades but millennia. All existential risks need to be jointly assessed, as opposed to addressing risks such as climate change and pandemics separately. Exploring the potential events that are likely to cause the biggest risks as well as asking why we should even desire to thrive into the distant future, this work looks at the 'biggest picture possible' in order to argue that futures-oriented decision-making ought to be a permanent aspect of human society and futures-oriented policy making must take precedent over the day-to-day policy making of current generations in times of great peril. The book concludes with a discourse on the truly fundamental bottom-up changes needed in our personal psychologies and culture to support these top-down recommendations. This book is of great interest to philosophers, policy analysts, political scientists, economists, psychologists, planners, and theologians.

**Global Environmental Change** National Research Council 1991-02-01 Global environmental change often seems to be the most carefully examined issue of our time. Yet understanding the human side of "human causes of and responses to environmental change" has not yet received sustained attention. Global Environmental Change offers a strategy for combining the efforts of natural and social scientists to better understand how our actions influence global change and how global change influences us. The volume is accessible to the nonscientist and provides a wide range of examples and case studies. It explores how the attitudes and actions of individuals, governments, and organizations intertwine to leave their mark on the health of the planet. The book focuses on establishing a framework for this new field of study, identifying problems that must be overcome if we are to deepen our understanding of the human dimensions of global change, presenting conclusions and recommendations.

This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will

find this report, with colored graphs, essential reading.

**Human Adaptability** Charles E. Oxnard 1997 This volume takes its subtitle from the theme of the ASHB meeting for 1996 'Human Adaptability: Future Trends and Lessons from the Past'. The first paper is the annual conference lecture 'Human Evolution Today: Which Way Next?' delivered by Professor Maciej Hennenberg, the newly appointed Wood Jones Professor at the University of Adelaide. This is followed by the transcripts of two papers resulting from a debate on 'Species and Human Evolution,' also from the meeting. The first is 'Species Concept in Palaeoanthropology' by Colin Groves and the second, 'The Problem of Species in Hominid Evolution' by Maciej Hennenberg. There are also a series of individual papers. Two of these are shorter integrative pieces: 'Philosophical Problems in Palaeoanthropology' by Darren Curnoe, and 'A Biological Basis for Generative Learning in Science' by Lynette Schavieren and Mark Cosgrove. These are followed in turn by two proffered papers on specific problems: 'Patterns of Morphological Discrimination in the Human Talus: a Consideration of the Case for Negative Function?', by Robert Kidd and Charles Oxnard, and 'The Specific Status of a new Siwalik Sivapithecine Specimen' by David Cameron, Rajeev Patnaik and Michelle Stevens. The final contribution is one of the longer integrative papers which has characterised each of the prior volumes: 'The Interface of Function, Genes, Development and Evolution: Insights from Primate Morphometrics' by Charles Oxnard.

**Engineering** Unesco 2010-01-01 This report reviews engineering's importance to human, economic, social and cultural development and in addressing the UN Millennium Development Goals. Engineering tends to be viewed as a national issue, but engineering knowledge, companies, conferences and journals, all demonstrate that it is as international as science. The report reviews the role of engineering in development, and covers issues including poverty reduction, sustainable development, climate change mitigation and adaptation. It presents the various fields of engineering around the world and is intended to identify issues and challenges facing engineering, promote better understanding of engineering and its role, and highlight ways of making engineering more attractive to young people, especially women.--Publisher's description.

**Our Common Agenda - Report of the Secretary-General** United Nations 2021-09-10 On the seventy-fifth anniversary of the United Nations, the world has faced its biggest shared test since the Second World War in the coronavirus disease (COVID-19) pandemic. Yet while our welfare, and indeed the permanence of human life, depend on us working together, international cooperation has never been harder to achieve. This report answers a call from UN Member States to provide recommendations to advance our common agenda and to respond to current and future challenges. Its proposals are grounded in a renewal of the social contract, adapted to the challenges of this century, taking into account younger and future generations, complemented by a new global deal to better protect the global commons and deliver global public goods. Through a deepening of solidarity—at the national level, between generations, and in the multilateral system—Our Common Agenda provides a path forward to a greener, safer and better future.

**The Precipice** Toby Ord 2020-03-24 This urgent and eye-opening book makes the case that protecting humanity's future is the central challenge of our time. If all goes well, human history is just beginning. Our species could survive for billions of years - enough time to end disease, poverty, and injustice, and to flourish in ways unimaginable today. But this vast future is at risk. With the advent of nuclear weapons, humanity entered a new age, where we face existential catastrophes - those from which we could never come back. Since then, these dangers have only multiplied, from climate change to engineered pathogens and artificial intelligence. If we do not act fast to reach a place of safety, it will soon be too late. Drawing on over a decade of research, *The Precipice* explores the cutting-edge science behind the risks we face. It puts them in the context of the greater story of humanity: showing how ending these risks is among the most pressing moral issues of our time. And it points the way forward, to the actions and strategies that can safeguard humanity. An Oxford philosopher committed to putting ideas into action, Toby Ord has advised the US National Intelligence Council, the UK Prime Minister's Office, and the World Bank on the biggest questions facing humanity. In *The Precipice*, he offers a startling reassessment of human history, the future we are failing to protect, and the steps we must take to ensure

that our generation is not the last. "A book that seems made for the present moment." —New Yorker

**What We Are: The Evolutionary Roots of Our Future** Lonnie Aarssen 2022-07-05 Other animals are driven to spend essentially their whole lives just trying to get fed, stay alive, and get laid. That's about it. The same was true for our proto-human ancestors. And modern humans of course also require a Survival Drive and a Sex Drive in order to leave descendants. But today we spend most of our lives mainly just trying to convince ourselves that our existence is not absurd. In *What We Are*, Queen's University biologist, Lonnie Aarssen, traces how our biocultural evolution has shaped *Homo sapiens* into the only creature that refuses to be what it is — the only creature preoccupied with a deeply ingrained, and absurd sentiment: I have a distinct 'mental life'—an 'inner self'—that exists separately and apart from 'material life', and so, unlike the latter, need not come to an end. This delusion conceivably gave our distant ancestors some wishful thinking for finding some measure of relief from the terrifying, uniquely human knowledge of the eventual loss of corporeal survival. But this came with an impulsive, nagging doubt — an obsessive underlying uncertainty: 'self-impermanence anxiety'. Biocultural evolution, however, was not finished. It also gave us two additional, uniquely human, primal drives, both serving to help quell the burden of this anxiety. Legacy Drive generates delusional cultural domains for 'extension' of self; and Leisure Drive generates pleasurable cultural domains for distraction - 'escape' - from self. Legacy Drive and Leisure Drive, Aarssen argues, represent two of the most profound consequences of human cognitive and cultural evolution. *What We Are* advances propositions regarding how a visceral susceptibility to self-impermanence anxiety has — paradoxically — played a pivotal role in rewarding the reproductive success of our ancestors, and has thus been a driving force in shaping fundamental motivations and cultural norms of modern humans. More than any other milestone in the evolution of human minds, self-impermanence anxiety, and its mitigating Drives for Legacy and Leisure, account for not just the advance of civilization over the past many thousands of years, but also now, its impending collapse. Effective management of this crisis, Aarssen insists, will require a deeper and more broadly public understanding of its Darwinian evolutionary roots — as laid out in *What We Are*.

**A Very Human Future** Rohit Talwar 2018-10-15 A Very Human Future is written from the premise that the pace of penetration and scale of disruption of new technologies requires us to adopt a new all-encompassing protective logic for society moving forward. Enriching Humanity in a Digitized World means placing humanity at the center of the agenda so that we avoid dehumanizing ourselves and future generations. As society enters the fourth industrial revolution, a major question arises—can we harness intense technological bursts of possibility to bring about a better world? A Very Human Future illustrates how the evolution of society, cities, people, businesses, industries, nations, and governments are being unexpectedly entangled by exponential technological disruption. This is not a book about technology but an exploration of how we make it serve humanity's highest needs and ambitions. Each chapter looks at how new ideas enabled by emerging technologies are straining the old social fabric, and proposes radical future scenarios, strategies, and actions to safeguard humanity from harm and enhance opportunity for all. This book is a manifesto for a future that is better than the past. A Very Human Future rejects an outlook where human beings live a mundane existence while technologies burst with possibility. Rather, we use this book to endorse a proactive approach to the future where technology is designed to benefit humanity purposefully and intentionally. To advocate for A Very Human Future we ask, for example, how do we use technology to overcome gender bias or to impart a meaningful education to new generations? Can artificial intelligence tools make government more trustworthy and help us deal with the impacts of automation replacing humans? What rights should people have when residing in smart cities? The scale of the new technologies requires a protective logic for moving forward, keeping humanity at the centre so that we avoid dehumanizing ourselves and future generations. A Very Human Future is not one, but many: positive stories and visions of the future can be powerful beacons for social adaptation. We argue that the time to control the narrative of the future and stake a claim for humanity is now. A Very Human Future uses knowledge as power, describing surprising ways new thinking and disruptive technology can impact society. This book explains that protecting what's human is the key to retaining our dominance over future technological progress.

The Future Al Gore 2013-01-29 NEW YORK TIMES BESTSELLER From the former vice president and #1 New York Times bestselling author comes An Inconvenient Truth for everything—a frank and clear-eyed assessment of six critical drivers of global change in the decades to come. Ours is a time of revolutionary change that has no precedent in history. With the same passion he brought to the challenge of climate change, and with his decades of experience on the front lines of global policy, Al Gore surveys our planet's beclouded horizon and offers a sober, learned, and ultimately hopeful forecast in the visionary tradition of Alvin Toffler's *Future Shock* and John Naisbitt's *Megatrends*. In *The Future*, Gore identifies the emerging forces that are reshaping our world:

- Ever-increasing economic globalization has led to the emergence of what he labels "Earth Inc."—an integrated holistic entity with a new and different relationship to capital, labor, consumer markets, and national governments than in the past.
- The worldwide digital communications, Internet, and computer revolutions have led to the emergence of "the Global Mind," which links the thoughts and feelings of billions of people and connects intelligent machines, robots, ubiquitous sensors, and databases.
- The balance of global political, economic, and military power is shifting more profoundly than at any time in the last five hundred years—from a U.S.-centered system to one with multiple emerging centers of power, from nation-states to private actors, and from political systems to markets.
- A deeply flawed economic compass is leading us to unsustainable growth in consumption, pollution flows, and depletion of the planet's strategic resources of topsoil, freshwater, and living species.
- Genomic, biotechnology, neuroscience, and life sciences revolutions are radically transforming the fields of medicine, agriculture, and molecular science—and are putting control of evolution in human hands.
- There has been a radical disruption of the relationship between human beings and the earth's ecosystems, along with the beginning of a revolutionary transformation of energy systems, agriculture, transportation, and construction worldwide.

From his earliest days in public life, Al Gore has been warning us of the promise and peril of emergent truths—no matter how "inconvenient" they may seem to be. As absorbing as it is visionary, *The Future* is a map of the world to come, from a man who has looked ahead before and been proven all too right. Praise for *The Future* "Magisterial . . . The passion is unmistakable. So is the knowledge. Practically every page offers an illumination."—Bloomberg "In *The Future* . . . Gore takes on a subject whose scale matches that of his achievements and ambition."—The New York Times Book Review "Historically grounded . . . Gore's strengths lie in his passion for the subject and in his ability to take the long view by putting current events and trends in historical context."—Publishers Weekly "Provocative, smart, densely argued . . . a tour de force of Big Picture thinking."—Kirkus Reviews (starred review) "A luminously intelligent analysis that is packed with arresting ideas and facts."—The Guardian
