Merging Systems into a Sysplex Frank Kyne 2014-09-05
This IBM Redbooks publication provides information to help Systems Programmers plan for merging systems into a sysplex. zSeries systems are highly flexible systems capable of processing many workloads. As a result, there are many things to consider when merging independent systems into the more closely integrated environment of a sysplex. This book will help you identify these issues in advance and thereby ensure a successful project.

Harnessing the Power of the New SMP Cluster Architecture 1999 In 1993, members of our team collaborated with Silicon Graphics to perform the first full-scale demonstration of the computational power of the SMP cluster supercomputer architecture. That demonstration involved the simulation of homogeneous,

compressible turbulence on a uniform grid of a billion cells, using our PPM gas dynamics code. This computation was embarrassingly parallel, the ideal test case, and it achieved only 4.9 Gflop/s performance, slightly over half that achievable by this application on the most expensive supercomputers of that day. After four to five solid days of computation, when the prototype machine had to be dismantled, the simulation was only about 20% completed. Nevertheless, this computation gave us important new insights into compressible turbulence and also into a powerful new mode of cost-effective, commercially sustainable supercomputing [S]. In the intervening 6 years, the SMP cluster architecture has become a fundamental strategy for several large supercomputer centers in the US, including the DOE's ASCI centers at Los Alamos National Laboratory and at the Lawrence Livermore National Laboratory and the NSF's center NCSA at the University

of Illinois. This SMP cluster architecture now underlies product offerings at the high-end of performance from SGI, IBM, and HP, among others. Nevertheless, despite many successes, it is our opinion that the computational science community is only now beginning to exploit the full promise of these new computing platforms. In this paper, we will briefly discuss two key architectural issues, vector computing and the flat multiprocessor architecture, which continue to drive spirited discussions among computational scientists, and then we will describe the hierarchical shared memory programming paradigm that we feel is best suited to the creative use of SMP cluster systems. Finally, we will give examples of recent large-scale simulations carried out by our team on these kinds of systems and point toward the still more challenging work which we foresee in the near future.

Introduction to the New Mainframe: z/OS Basics Mike Ebbers 2012-01-04 This IBM® Redbooks® publication provides students of information systems technology with the background knowledge and skills necessary to begin using the basic facilities of a mainframe computer. It is the first in a planned series of book designed to introduce students to mainframe concepts and help prepare them for a career in large systems computing. For optimal learning, students are assumed to have

successfully completed an introductory course in computer system concepts, such as computer organization and architecture, operating systems, data management, or data communications. They should also have successfully completed courses in one or more programming languages, and be PC literate. This book can also be used as a prerequisite for courses in advanced topics or for internships and special studies. It is not intended to be a complete text covering all aspects of mainframe operation or a reference book that discusses every feature and option of the mainframe facilities. Others who will benefit from this book include experienced data processing professionals who have worked with non-mainframe platforms, or who are familiar with some aspects of the mainframe but want to become knowledgeable with other facilities and benefits of the mainframe environment.

Haiti International Monetary Fund. Western Hemisphere Dept. 2023-08-30 Haiti faces a challenging macroeconomic outlook amid a dire humanitarian crisis. The country has been hit hard by the economic spillovers from Russia's invasion of Ukraine, with food price inflation triggering a hunger crisis. This global shock has been compounded by a highly volatile security situation, which has heightened the economy's fragility, hampered activity, and generated supply-side bottlenecks which have further fueled inflation. The flash floods which hit the country in early June caused loss of life and damage to key infrastructure. Risks to the outlook remain substantial.

Contextualizing Jamaica's Relationship with the IMF

Christine Clarke 2020-10-05

This ambitious book provides a comprehensive quantitative and qualitative assessment of Jamaica's ties to the International Monetary Fund, focusing on Jamaica's historical relationship with the IMF and reflecting on the domestic and international discourse surrounding the evolution of this relationship. Notably, this volume presents a critical analysis of Jamaica's first engagement with and departure from the IMF and interrogates the political economy of the period.

Jamaica's economic experiences are assessed in the context of major global events, including the food price crises of 2007 and the global economic crises of 2008 and

Ingredients for Successful System Level Design

Methodology Hiren D. Patel
2008-06-06 ESL or “Electronic System Level” is a buzz word these days, in the electronic design automation (EDA) industry, in design houses, and in the academia. Even though numerous trade magazine articles have been written, quite a few books have been published that have attempted to define ESL, it is still not clear what exactly it entails. However, what seems clear to every one is that the “Register Transfer Level” (RTL) languages are not adequate any more to be the design entry point for today’s and tomorrow’s complex electronic system design. There are multiple reasons for such thoughts. First, the continued progression of the miniaturization of the silicon

technology has led to the ability of putting almost a billion transistors on a single chip. Second, applications are becoming more and more complex, and integrated with communication, control, ubiquitous and pervasive computing, and hence the need for ever faster, ever more reliable, and more robust electronic systems is pushing designers towards a productivity demand that is not sustainable without a fundamental change in the design methodologies. Also, the hardware and software functionalities are getting interchangeable and ability to model and design both in the same manner is gaining importance. Given this context, we assume that any methodology that allows us to model an entire electronic system from a system perspective, rather than just hardware with discrete-event or cycle based semantics is an ESL methodology of some kind.
