Science and Civilisation in China: Volume 3, Mathematics and the Sciences of the Heavens and the Earth Joseph Needham 1959 After two volumes mainly introductory, Dr Needham now embarks upon his systematic

study of the development of the natural sciences in China. The Sciences of the Earth follow: geography and cartography, geology, seismology and mineralogy. Dr Needham distinguishes parallel traditions of scientific cartography and religious cosmography in East and West, discussing orbocentric wheel-maps, the origins of the rectangular grid system, sailing charts and relief maps, Chinese survey methods, and the impact of Renaissance cartography on the East. Finally-and here Dr Needham's work has no Western predecessors-there are full accounts of the Chinese contribution to geology and mineralogy.

The Eye and the Sun S. Vavilov 2001-03 The ancient conjecture as to the affinity of the Eye and the Sun has remained in modern natural science, though in a profoundly altered form. In our days science has discovered the true connection between the Eye and the Sun, a

connection entirely different from that inferred by children, poets and the ancients. It is this true connection that this book is about.

Encyclopedia of Applied Plant Sciences

2016-08-27 Encyclopedia of Applied Plant Sciences, Second Edition presents both foundational and applied information on plants used by humans as sources of food, raw materials, and amenity purposes. It highlights how the underlying science and information links through to applications in practical situations. Since the last edition was published, the role of applied science in agricultural production has been brought into greater focus as fluctuations in global food production feed through into prices and availability to consumers. At the same time, technological advances are changing the way plant science is done. This Second Edition has been expanded to include specific chapters on the leading crops and crop-types, as well as updated chapters on plant development, photosynthesis, metabolism, nutrition, reproduction, seed biology, plant pests and diseases, weed biology, and responses to environmental stresses. The updated chapters reflect progress, particularly in genome sequencing and molecular genetics and biotechnology, including genetic modification, that have taken place since the first edition was published. In addition, the book places these developments in the wider context of biodiversity, food security, intellectual property, and ethical considerations. Presents complete, up-to-date, authoritative information on over 25 separate areas of plant science, covering both theory and applications Edited and written by a distinguished international group of editors and contributors Provides concise, easy to read gateway entries to topics, each supplemented with a further reading list that allows practitioners, students, and researchers to delve deeper into each topic
