Oxford Textbook of Suicidology and Suicide Prevention Danuta

Wasserman 2021-01-08 Approximately 1 million people commit suicide world-wide annually and around 10 million attempt suicide each year. Suicide is a major public health problem throughout the world, and major efforts are currently being made to help reduce these numbers. However, suicide is the result of complex interactions between a range of factors, including historical, psychological, cultural, biological, and social, and any approach to treating the problem of suicide has to consider all these factors. This new edition of the Oxford Textbook of Suicidology and Suicide Prevention has been thoroughly updated and expanded since publication of the first edition in 2009. This comprehensive resource covers all aspects of suicidal behaviour and suicide prevention from a number of different perspectives, including its underlying religious and cultural factors; its political, social and economic causes; its psychiatric and somatic determinants; and its public health impacts. The new edition includes several new clinically focussed chapters devoted to major psychiatric disorders and their relation to suicide, including mood and anxiety disorders, substance abuse, psychosis/schizophrenia, bipolar disorder, eating disorders, and personality disorders. It also includes a fully updated section on

psychometric scales used for measuring suicidal behaviour and instruments used in suicide preventative interventions. Part of the authoritative Oxford Textbooks in Psychiatry series, this second edition will continue to serve as the key reference source for both researchers and professionals working in the areas of suicidology and suicide prevention, including psychiatrists, clinical psychologists, public health specialists, and neuroscientists.

Crime and Punishment in Early Modern Germany Maria R. Boes 2016-05-13 Frankfurt am Main, in common with other imperial German cities, enjoyed a large degree of legal autonomy during the early modern period, and produced a unique and rich body of criminal archives. In particular, Frankfurt's Strafenbuch, which records all criminal sentences between 1562 and 1696, provides a fascinating insight into contemporary penal trends. Drawing on this and other rich resources, Dr. Boes reveals shifting and fluid attitudes towards crime and punishment and how these were conditioned by issues of gender, class, and social standing within the city's establishment. She attributes a significant role in this process to the steady proliferation of municipal

advocates, jurists trained in Roman Law, who wielded growing legal and penal prerogatives. Over the course of the book, it is demonstrated how the courts took an increasingly hard line with select groups of people accused of criminal behavior, and the open manner with which advocates exercised cultural, religious, racial, gender, and sexual-orientation repressions. Parallel with this, however, is identified a trend of marked leniency towards soldiers who enjoyed an increasingly privileged place within the judicial system. In light of this discrepancy between the treatment of civilians and soldiers, the advocates' actions highlight the emergence and spread of a distinct military judicial culture and Frankfurt's city council's contribution to the quasi-militarization of a civilian court. By highlighting the polarized and changing ways the courts dealt with civilian and military criminals, a fuller picture is presented not just of Frankfurt's sentencing and penal practices, but of broader attitudes within early modern Germany to issues of social position and cultural identity.

Sociology Rodney Stark 2001

Why God? Rodney Stark 2017-03-30 Why is it that the majority of people, from all socio-economic, education, and ethnic backgrounds, ascribe to some sort of faith? What draws us to religion? What pushes us away? And what exactly is religion anyway? Defining religion over the past century has, ironically, led to theories that exclude belief in God, proposing that all systems of thought concerning the meaning of life are religions. Of course, this makes it impossible to distinguish the village priest from the village atheist, or Communism from Catholicism. Worse yet, it makes all religious behavior irrational, presuming that, for example, people knowingly pray to an empty sky. Renowned sociologist of religion Rodney Stark offers a comprehensive, decisive, God-centered theory of religion in his book, *Why God: Explaining Religious Phenomena*. While his intent is not to insist that God exists, Stark limits religions to systems of thought based on belief in supernatural beings—to Gods. With this God-focused theory, Stark explores the entire range of religious topics, including the rise of monotheism, the discovery of sin, causes of religious hostility and conflict, and the role of

revelations. Each chapter of *Why God?* builds a comprehensive framework, starting with the foundations of human motivations and ending with an explanation of why most people are religious. Stark ultimately settles what religion is, what it does, and why it is a universal feature of human societies. *Why God?* is a much needed guide for anyone who wants a thorough understanding of religion and our relationship to it, as well as a firm refutation to those who think religion can exist without the divine.

Emile Durkheim on the Family Mary Ann Lamanna 2001-10-24 Emile Durkheim on the Family is intended to bring attention to this classical sociologist's work on the family. Durkheim's writings in this area are little known, but the family was nevertheless one of his primary interests, the subject of an intended book that was never written. Durkheim's ideas on the family appear only in scattered sources and a number of those sources have not been translated into English. Durkheim's *Sociology of the family* has not heretofore been presented and analyzed holistically. Controlling Crime, Controlling Society Dario Melossi 2013-05-02 How did anxieties about crime and deviance emerge in the modern world, first in Europe and then in America? How did they come to occupy centre-stage in the ongoing drama played out in public discourse? And how have theories of crime and deviance related to the actual practices of social control and punishment, and to the main currents of social conflict? In this illuminating new book, Dario Melossi addresses these crucial questions, and at the same time offers an engaging survey of the theories of social control, crime and deviance. From the early work of Beccaria and Lombroso, via the pioneering sociology of 1920s Chicago, to 60s radicalism and the subsequent emergence of a "culture of fear", the book covers the full range of theoretical thinking in this area, including more recent assessments of mass imprisonment in post-9/11 America. In a sharp and lucid style, Melossi argues that two orientations have always been battling each other in society, one in which the control of crime is paramount, and the other in which controlling crime becomes secondary to the exercise of wider social control. Conceived and written by a scholar who has been active for many years both in Europe and the

United States, the text will be an invaluable aid to advanced students and scholars of sociology and criminology on both sides of the Atlantic.

Suicide as a Cultural Institution in Dostoevsky's Russia Irina Paperno 2018-09-05 In the popular and scientific imagination, suicide has always been an enigmatic act that defies, and yet demands, explanation. Throughout the centuries, philosophers and writers, journalists and scientists have attempted to endow this act with meaning. In the nineteenth century, and especially in Russia, suicide became the focus for discussion of such issues as the immortality of the soul, free will and determinism, the physical and the spiritual, the individual and the social. Analyzing a variety of sources—medical reports, social treatises, legal codes, newspaper articles, fiction, private documents left by suicides—Irina Paperno describes the search for the meaning of suicide. Paperno focuses on Russia of the 1860s-1880s, when suicide was at the center of public attention.

Aberration of Mind Diane Miller Sommerville 2018-09-25 More than 150 years after its end, we still struggle to understand the full extent of the human toll of the Civil War and the psychological crisis it created. In *Aberration of Mind*, Diane Miller Sommerville offers the first book-length treatment of suicide in the South during the Civil War era, giving us insight into both white and black communities, Confederate soldiers and their families, as well as the enslaved and newly freed. With a thorough examination of the dynamics of both racial and gendered dimensions of psychological distress, Sommerville reveals how the suffering experienced by Southerners living in a war zone generated trauma that, in extreme cases, led some Southerners to contemplate or act on suicidal thoughts. Sommerville recovers previously hidden stories of individuals exhibiting suicidal activity or aberrant psychological behavior she links to the war and its aftermath. This work adds crucial nuance to our understanding of how personal suffering shaped the way southerners viewed themselves in the Civil War era and underscores the full human costs of war.

Advancing Suicide Research Kairi Kõlves 2021-11-30 In this book leading researchers provide an overview of current best practices in the conduct of suicide research. They describe quantitative, qualitative, and mixed-methods approaches in suicide-prevention research from a public health perspective. In addition, other aspects that are crucial to effective suicide research are examined, including definitional issues, historical background, and ethical aspects. The clearly written chapters include both theoretical and practical information along with specific examples from different areas of suicide research and prevention. This volume is ideal for researchers, students, and academics interested in suicide research, as well as policy makers, clinicians, and other practitioners.

Suicide and the Subject of Mordern Life Daryl Edward Lee 2001
Race and Suicide in South Africa Fatima Meer 2022-10-05 Originally published in 1976 Race and Suicide in South Africa synthesises the two dimensions of suicide: the personal and the social phenomenon. Its approach is Durkheimian in the use of court records, and phenomenological in the examination of actual cases. About 1500 cases of suicide in Durban from 1940-70 are analysed in terms of race, sex, occupation, marital status, economic status, family type and size, residential area, time and method used. What emerges is a revealing picture of suicide in South African ethnic groups. The findings confute the idea of Durkheim and others that behaviour in suicide conforms to certain universal principles and suggest the crucial role of particular social conditions in determining suicide trends, while at the same time challenging the proposition that a high suicide rate is associated with high status. Instead the author found that there were common emotional syndromes among suicides, but there were contributed to by different social factors.

What We Now Know About Race and Ethnicity Michael Banton† 2015-10-01 Attempts of nineteenth-century writers to establish “race” as a biological concept failed after Charles Darwin opened the door to a new world of knowledge. Yet this word already had a place in the organization of everyday life and in ordinary English language usage. This book explains how the idea of race became so important in the USA, generating conceptual confusion that can now be clarified. Developing an international approach, it reviews references to “race,” “racism,” and “ethnicity” in sociology, anthropology, philosophy, and comparative politics and identifies promising lines of research that may make it possible to supersede misleading notions of race in the social sciences.

America's Blessings Rodney Stark 2012-12-01 A few years ago, a debate between atheists and religious believers spilled out from the halls of academia and the pews of America’s churches and into the public spotlight. A crop of atheist manifestos led the charge, surmounting and holding the tops of the nonfiction bestseller lists. This offensive brought on an outpouring of religious rebuttals. As both sides exchanged spirited volleys, accusations were leveled; myths, stereotypes, and strawmen arguments were perpetuated; and bitter hostility filled the air. Today many of these misconceptions and myths linger on, along with the generally acrimonious spirit of the debate. In America’s Blessings, distinguished researcher Rodney Stark seeks to clear the air of this hostility and debunk many of the debate’s most widely perpetuated misconceptions by drawing from an expansive pool of sociological findings. Looking at the measurable effects of religious faith and practice on American society, Stark rises above the fray and focuses exclusively on facts. His findings may surprise many, atheists and believers alike. Starting with a historical overview, Stark traces America’s religious roots from the founding of the country up through the present day, showing that religiosity in America has never been consistent, static, or monolithic. Interestingly, he finds that religious practice is now more prevalent than ever in America, despite any claims to the contrary. From here, Stark devotes whole chapters to unpacking the latest research on how religion affects different facets of modern American life, including crime, family life, sexuality, mental and physical health, sophistication, charity, and overall prosperity. The cumulative effect is that when translated into comparisons with western European nations, the United States comes out on top again and again. Thanks in no small part to America’s rich religious culture, the nation has far lower crime rates, much higher levels of charitable giving, better health, stronger marriages, and less suicide, to note only a few of the benefits. In the final chapter, Stark assesses the financial impact of these religious realities. It

turns out that belief benefits the American economy—and all 300 million citizens, believer and nonbeliever alike—by a conservative estimate of \$2.6 trillion a year. Despite the atheist outcry against religion, the remarkable conclusion is clear: all Americans, from the most religious among us to our secular neighbors, really ought to count our blessings.

Sadly Troubled History John C. Weaver 2009-04-01 More people die by suicide each year than by homicide, wars, and terrorist attacks combined. Witnesses and survivors are left perplexed and troubled. Doctors, clinical psychologists, and social workers try to deal with it through their professional routines; sociologists and psychiatrists attempt to provide theoretical explanations of it. In a study of nearly 7000 suicides from 1900 to 1950 in New Zealand and Queensland, Australia, John Weaver documents the challenges that ordinary people experienced during turbulent times and, using witnesses' testimony, death bed statements, and suicide notes, reconstructs individuals' thoughts as they decide whether to endure their suffering. Bridging social and medical history, Weaver presents an intellectual and political history of suicide studies, a revealing construction and deconstruction of suicide rates, a discussion of gender, life stages, and socio-economic circumstances in relation to suicide patterns, reflections on reasoning processes and intent, and society's reactions to suicide, including medical intervention. A Sadly Troubled History marshals thousands of suicide inquests, replete with observations on the anxieties of unemployment, the heartbreak of romantic disappointment, the pain of domestic turmoil, and the torments of mental illness, to demonstrate that history - although, like biochemistry, sociology, psychology, and psychiatry, reliant on remarkable yet imperfect information - can contribute to a better understanding of the suicidal act and its motives.

Italian Literature Before 1900 in English Translation Robin Healey 2011-01-01 "Italian Literature before 1900 in English Translation

provides the most complete record possible of texts from the early periods that have been translated into English, and published between 1929 and 2008. It lists works from all genres and subjects, and includes translations wherever they have appeared across the globe. In this annotated bibliography, Robin Healey covers over 5,200 distinct editions of pre-1900 Italian writings. Most entries are accompanied by useful notes providing information on authors, works, translators, and how the translations were received. Among the works by over 1,500 authors represented in this volume are hundreds of editions by Italy's most translated authors - Dante Alighieri, [Niccoláo] Machiavelli, and [Giovanni] Boccaccio - and other hundreds which represent the author's only English translation. A significant number of entries describe works originally published in Latin. Together with Healey's Twentieth-Century Italian Literature in English Translation, this volume makes comprehensive information on translations accessible for schools, libraries, and those interested in comparative literature."--Pub. desc.

A Critical Dictionary of Sociology Raymond Boudon 2002-09-10 Unlike most other sociology or social science dictionaries, in this translation of the Critical Dictionary of Sociology, taken from the second French edition of the Dictionary and edited by the English sociologist Peter Hamilton, the critical value of this distinctive work is at last made available for a wider audience. Each entry grapples directly with an issue, whether theoretical, epistemological, philosophical, political or empirical, and provides a strong statement of what the authors think about it. The discussions are considered but argumentative. By reaffirming that a non-marxist style of critique is still possible, Boudon and Bourricaud have presented a distinctive approach to the key issues which confront the societies of the Twentieth and Twenty-First centuries. For some this work will be a textbook, for others an indispensable sourcebook of sociological concepts, and for most a way of opening our eyes to new dimensions in our understanding of the great ideas and theories of sociology.

The Demographic Crisis in Europe Richard R. Verdugo 2021-05-01 By most accounts, Europe has been mired in a “demographic crisis” since about 1970. By a demographic crisis is meant that Europe’s dependency ratio is increasing, and the net result has been declining populations and fewer workers to sustain society. However, there are certain issues that need attention. Two topics seem to capture some of these issues: The implications of the possible crisis, and the crisis’ assessment. The present volume is organized around both topics (implications and assessment). There are at least three contributions being made by the proposed volume. To begin with, while there are other issues related to the demographic crisis in Europe the present volume should motivate additional research. Secondly, the research in the proposed volume does not necessarily assume that there is a demographic crisis in Europe nor that it is consistent across national lines. Thus, each chapter, in essence, examines a different issue associated with the proposal that there is a crisis. Finally, the present volume makes several methodological contributions. For example, the chapter by David Swanson uses non-Bayesian modeling in studying infant mortality. Richard Verdugo examines the dependency ratio and selected factors on economic growth in selected European nations, Kposowa and Ezzat conduct an assessment, Martins examines variation in the path toward a crisis, Johnson examines humanitarian migration and the crisis, Edmonston examines the association between geopolitics and the crisis.
