*The Birds of Turkey* Guy Kirwan 2010-06-30 Turkey is a popular destination for birders and tourists, and although there has been much published on its birds over the past 40 years, there has never been a comprehensive avifauna. The Birds of Turkey redresses this. It contains a detailed account of every species on the Turkish list, with a full breakdown of records and status, distribution in Turkey, and taxonomy. There are also authoritative introductory chapters on geography, climate, habitats, history of ornithology and conservation.

**Bird Families of the World** David Ward Winkler 2015 This volume is a synopsis of the diversity of all birds. It distills the voluminous detail of the 17-volume Handbook of Birds of the World into a single book. Based on the latest systematic research and summarizing what is known about the life history and biology of each group, this volume is the best single-volume entry to avian diversity available.

*National Geographic Complete Birds of the World* National Geographic Society (U.S.) 2009 Offers detailed information on every bird family in the world, including their physical characteristics, behaviors, conservation status, taxonomy, and photographs of individual species.

**The Avifauna of an Upland Seasonal Woodland in Central Kenya** Lester L. Short 2006

**Birds of the World** Les Beletsky 2006 This stunning collection of art and text captures the grace, beauty, and flamboyance of the world's birds. It features more than 1,600 original paintings from 11 of the world's leading bird artists.

*Birds of New Guinea* Thane K. Pratt 2014-10-26 Previous edition by Bruce M. Beehler, Thane K. Pratt, and Dale A. Zimmerman.

*Sunbirds* Clive F. Mann 2010-07-30 Sunbirds is the first book since the 19th Century to cover in detail all the world's sunbirds and spiderhunters - the Nectarinidae. It also includes the allied families of flowerpeckers and sugarbirds; a total of 176 species is described and illustrated. The book has been designed to help readers identify all of these species and also their various subspecies, the most distinctive of which are illustrated as well as described. Each species account provides a distribution map, a summary of identification criteria and a description of how the species differs from similar ones. The calls and songs, habitat, geographical distribution, status, movements, food (including a list of known food plants), habits, and breeding biology are also described. Finally, a full description of the species and salient features of each subspecies is given, together with measurements and references. Sunbirds not only aids identification, it provides a wealth of information on the ecology and behaviour of these birds. The authors have carried out extensive fieldwork in Asia and Africa. They have also studied skins, nests and eggs held by museums, analysed tape recordings and critically reviewed the vast amount of material contained in books and scientific journals. The superb plates would not have been possible without the exhaustive study of specimens which, together with the use of photographs of living birds, has resulted in the artist, Richard Allen, capturing the essence of the birds, their 'jizz', and accurately portraying the beautiful, bright, often iridescent, plumages of these spectacular families.

*CRC Handbook of Avian Body Masses, Second Edition* John B. Dunning, Jr. 2007-12-05 See what's new in the Second Edition: · Number of species included is increased from 6300 to over 8700, about 85% of the world's birds · Better data for many of the species included in the first edition — an exhaustive compilation of new data published from 1992

through 2007 · More comprehensive coverage of Latin America, Japan, Taiwan, Southeast Asia, and more coverage of research published in non-English language journals In 1992 the CRC Handbook of Avian Body Masses broke new ground by providing a compilation of body masses for 6300 species, about two-thirds of the world's species. The handbook instantly became the gold standard, cited in hundreds of scientific studies and a prominent fixture on the shelves of many ornithologists. Keeping the format that made the first edition so popular, the second edition features dramatic changes both in species coverage and the data quality. The new edition compiles the results of new samples that have been published for many of the birds included in the first edition, and data found for about 2400 new species, increasing the coverage to over 8700 species, about 85% of the world's birds. The order of species and families has been revised in the text to fit with the latest publications in avian taxonomy and systematics. The second edition includes an accompanying CD-ROM with a searchable electronic database.

**Birds of Paradise and Bowerbirds** Phil Gregory 2020-01-09 Renowned for their elaborate and dazzling plumages, the birds of paradise (Paradisaeidae) and bowerbirds (Ptilonohynchidae) exhibit some of the most astonishing behaviours in the avian kingdom. The former is the most iconic group of birds found in New Guinea, while the bowerbirds extend into Australia, and are perhaps best known for the males' construction of avenue bowers, used to tempt females on the forest floor. This comprehensive monograph is dedicated to these two families, combining the product of more than two decades of research and scholarship with original observations by the author and many other knowledgeable contributors. Birds of Paradise and Bowerbirds is the ultimate reference to these two groups. It provides a thorough guide to their identification, taxonomy and ecology, with detailed distribution maps accompanying the text. A series of beautifully illustrated plates by Richard Allen cover all of the 108 recognised taxa in these groups, with these supplemented by more than 200 photographs covering a range of racial and age-related plumage variety. This book is an indispensable addition to the libraries of all birders and ornithologists interested in these sensational birds.

**Birds New to Science** David Brewer 2018-01-26 Amazing as it might sound, ornithologists are still discovering several bird species each year that are completely new to science. These aren't all obscure brown birds on tiny islands - witness the bizarre Bare-faced Bulbul from Laos (2009), spectacular Araripe Manakin from Brazil (1998), or gaudy Bugun Liocichla from north-east India (2006). Birds New to Science documents more than half a century of these remarkable discoveries, covering around 300 species. Each account includes the story of discovery, a brief description of the bird (many with accompanying photographs), and details of what is known about its biology, range and conservation status. Written in an engaging style, this is a rich reference to an incredible era of adventure in ornithology.

**The Flowering of Australia's Rainforests** Geoff Williams 2021-05-03 The Flowering of Australia's Rainforests provides a comprehensive introduction to the pollination ecology, evolution and conservation of Australian rainforest plants, with particular emphasis on subtropical rainforests and their associated pollinators. This significantly expanded second edition includes new information on the impact of climate change, fire, fragmentation and invasive species. Rainforests continue to be a focus of global conservation concern, not only from threats to biodiversity in general, but to pollinators specifically. Within Australia, this has been emphasised by recent cataclysmic fire impacts, ongoing extreme drought events, and the wider consideration of climate change. This second edition strengthens coverage of these issues beyond that of

the first edition. The Flowering of Australia's Rainforests makes timely contributions to our understanding of the nature and function of the world's pollinator fauna, plant-reproduction dependencies, and the evolutionary pathway that has brought them to their current state and function. Illustrated with 150 colour plates of major species and rainforest formations, this reference work will be of value to ecologists and field naturalists, botanists, conservation biologists, ecosystem managers and community groups involved in habitat restoration.

**Systematics and Taxonomy of Australian Birds** Les Christidis 2008 Lists all those species of birds that have been recorded from the Australian mainland, Tasmania, island territories and surrounding waters. Based on the authors' original book The Taxonomy and Species of Birds of Australia and its Territories, it includes any new species for which records have been accepted by the Records Appraisal Committee of Birds Australia. It also includes all extant and recently extinct (post-1800) native species, as well as new species, accepted vagrants and introduced species that have become established and continue to survive in the wild.
