Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures Helaine Selin 1997-07-31 The Encyclopaedia fills a gap in both the history of science and in cultural studies. Reference works on other cultures tend either to omit science completely or pay little attention to it, and those on the history of science almost always start with the Greeks, with perhaps a mention of the Islamic world as a translator of Greek scientific works. The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures' science. Our aim is not to claim the superiority of other cultures, but to engage in a mutual exchange of ideas. The Western academic divisions of science, technology, and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected. This work contributes to redressing the balance in the number of reference works devoted to the study of Western science, and encourages awareness of cultural diversity. The Encyclopaedia is the first compilation of this sort, and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today. There is nothing that crosses disciplinary and geographic boundaries, dealing with both scientific and philosophical issues, to the extent that this work does. xi PERSONAL NOTE FROM THE EDITOR Many years ago I taught African history at a secondary school in Central Africa.

Les astres dans les textes religieux en Égypte antique et dans les hymnes orphiques Amanda-Alice Maravelia 2006 Oxbow says: Based on the author's PhD, this volume studies 'the celestial bodies in the religious texts of ancient Egypt and in the Hellenic Orphic Hymns'. Maravelia examines the development of astronomical thought and concepts, including those of the sun, moon, stars and planets, in pharaonic Egypt from c.

*Noah and the Deluge: Chronological, Historical and Archaeological Evidence* Gerard Gertoux 2015-10-19 Historians consider the biblical account of Noah and the Deluge as a myth. However, this famous event occurred at the earliest times of recorded history (Sumerian King List). Today scientists believe in the last ice age called Pleistocene ending in 10,000 BCE, but there is no witness of this planetary cataclysmic event and its existence is based solely on the controversial interpretation of its consequences and their dating. The existence of erratic blocks and the disappearance of mammoths are presented as evidence of the last glaciation. However, despite dating obtained by <sup>14</sup>C (calibrated by dendrochronology) is considered absolute by most experts its confrontation with the Egyptian chronology, in which some dates are fixed by astronomy, reverses this widespread belief and shows that dates obtained by <sup>14</sup>C increase exponentially before -2200. Thus the rate of <sup>14</sup>C tends gradually to 0 around -3500, which implies an important consequence: before -3500, <sup>14</sup>C dating is no longer possible.

Feasts and Fights Anthony Spalinger 2018-12-31 Standing as a summary of Spalinger's ideas at the time of the Yale lectures in 2012, this study covers two research sides of modern Egyptological research by a life-

long student of ancient Egyptian calendrics and the Egyptian military. The first three chapters cover the development of Richard Parker's seminal study from 1950 and move into the present stage of scholarship. Very important is the author's clarification of what Parker wrote in his paradigmatic work, a slim volume often misunderstood. Hence, the thrust of argument concentrates upon the dating of feasts, the names of the Egyptian months and their metamorphoses, in addition to the retention of lunar-based phenomena. Two final chapters turn to the military aspects of New Kingdom warfare, with emphasis placed upon Seti I and logistical arrangements.

**Middle Egyptian** James P. Allen 2010-04-15 Middle Egyptian introduces the reader to the writing system of ancient Egypt and the language of hieroglyphic texts. It contains twenty-six lessons, exercises (with answers), a list of hieroglyphic signs, and a dictionary. It also includes a series of twenty-five essays on the most important aspects of ancient Egyptian history, society, religion and literature. The combination of grammar lessons and cultural essays allows users to not only read hieroglyphic texts but also to understand them, providing readers with the foundation to understand texts on monuments and to read great works of ancient Egyptian literature in the original text. This second edition contains revised exercises and essays, providing an up to date account of current research and discoveries. New illustrations enhance discussions and examples. These additions combine with the previous edition to create a complete grammatical description of the classical language of ancient Egypt for specialists in linguistics and other fields.

**Civilization Before Greece and Rome** H. W. F. Saggs For many centuries it was accepted that civilization began with the Greeks and Romans. During the last two hundred years, however, archaeological discoveries in Egypt, Mesopotamia, Crete, Syria, Anatolia, Iran, and the Indus Valley have revealed that rich cultures existed in these regions some two thousand years before the Greco-Roman era. In this fascinating work, H.W.F Saggs presents a wide-ranging survey of the more notable achievements of these societies, showing how much the ancient peoples of the Near and Middle East have influenced the patterns of our daily lives. Saggs discusses the invention of writing, tracing it from the earliest pictograms (designed for account-keeping) to the Phoenician

alphabet, the source of the Greek and all European alphabets. He investigates the curricula, teaching methods, and values of the schools from which scribes graduated. Analyzing the provisions of some of the law codes, he illustrates the operation of international law and the international trade that it made possible. Saggs highlights the creative ways that these ancient peoples used their natural resources, describing the vast works in stone created by the Egyptians, the development of technology in bronze and iron, and the introduction of useful plants into regions outside their natural habitat. In chapters on mathematics, astronomy, and medicine, he offers interesting explanations about how modern calculations of time derive from the ancient world, how the Egyptians practiced scientific surgery, and how the Babylonians used algebra. The book concludes with a discussion of ancient religion, showing its evolution from the most primitive forms toward monotheism. *Ovid: a Very Short Introduction* Llewelyn Morgan 2020-09-24 Ovid, witty of ancient poets, has been an influential model for writers and artists throughout the ages. Llewelyn Morgan introduces the poet and his works, describing each of his poems in turn, setting them in their social and literary context, and considering the twist of events that led to the exile of Rome's most celebrated artist.

**Civil Calendar and Lunar Calendar in Ancient Egypt** Leo Depuydt 1997 This investigation is concerned with ancient Egyptian calendars. Its specific focus is one of the oldest problems of the study of these calendars: the so-called problem of the month names. This work's main purpose is to suggest an explanation for the Brugsch phenomenon. The Brugsch phenomenon is one of the two main aspects of the problem of the month names. The other is the Gardiner phenomenon. No new theory is presented for the Gardiner phenomenon. As a problem, the Brugsch phenomenon is slightly older than the Gardiner Phenomenon. It has occupied center stage in the study of ancient Egyptian calendars since the early days of this endeavor. In 1870, Heinrich Brugsch, the great pioneer in this subject, wrote about the phenomenon, "Here we encounter all at once the most curious contradiction." Just recently, Rolf Krauss has described the contradiction as still "unsolved". The Brugsch phenomenon concerns the indisputable fact that the last or twelfth month of the Egyptian civil year can be named as if it were the first. Two month names are involved. The first is wp rnpt. Its meaning "opener of the year," refers to a beginning. The second month name is mswt r' "birth of Re" in hieroglyphic Egyptian, Mesore in Aramaic, Greek and Coptic. Both can otherwise also refer to New Year's Day, the quintessential calendrical beginning.

*The Greeks in the East* Alexandra Villing 2005 Eight authoritative essays explore the changing relationships between the Greeks and their Eastern neighbours from the Bronze Age to the Classical period, examining archaeological evidence in the shape of pottery, wall-painting, sculpture, architecture, jewellery, seals, and inscriptions. The papers cover a wide range of topics, including trade, settlements, and cultural and artistic interchange. They assess the actual presence of Minoans, Mycenaeans and later Greeks in the East and shed light on the economic and political interaction between Greeks and the peoples of Mesopotamia and Anatolia, the Hittite Empire, Phoenicia, Syria, and Achaemenid Persia. Milestone contributions include the definitive survey and analysis of the recent excavations at the most important Greek Bronze Age site in Asia Minor, Miletus.

**Astrology and Cosmology in Early China** David W. Pankenier 2013-10-10 The ancient Chinese were profoundly influenced by the Sun, Moon and stars, making persistent efforts to mirror astral phenomena in shaping their civilization. In this pioneering text, David W. Pankenier introduces readers to a seriously understudied field, illustrating how astronomy shaped the culture of China from the very beginning and how it influenced areas as disparate as art, architecture, calendrical science, myth, technology, and political and military decision-making. As elsewhere in the ancient world, there was no positive distinction between astronomy and astrology in ancient China, and so astrology, or more precisely, astral omenology, is a principal focus of the book. Drawing on a broad range of sources, including archaeological discoveries, classical texts, inscriptions and paleography, this thought-provoking book documents the role of astronomical phenomena in the development of the 'Celestial Empire' from the late Neolithic through the late imperial period.

**Making Time for the Past** Katherine Clarke 2008-03-20 In this study of time and history in the ancient Greek world, Katherine Clarke argues that choices concerning the articulation and expression of time, especially time past, reflect the values of those who narrate it and also of their audiences. In this way construction of the past both displays and contributes to a sense of shared identity.

**Vom Paläolithikum zur Postmoderne** Andreas Kamp 2010 Dies ist der erste Teil einer zweibändigen Studie zur Genese unseres heutigen, vom Anspruch her den chronologischen Verlauf der gesamten Menschheitsgeschichte strukturierenden [Epochen]-Systems. Der Band skizziert zunächst die geistesgeschichtlichen Prämissen. Von der rudimentären paläolithischen Zeiteinteilung führt er über die ältesten schriftlich dokumentierten Ordnungsversuche in den sumerischen bzw. ägyptischen [Königlisten], griechische und römische Autoren, Petrarca, Bruni und Vasari bis zu Cellarius, der am Ende des 17. Jahrhunderts die Drei-Zeitalter-Distinktion [Antike-Mittelalter-Neuzeit] zum zentralen chronologischen Gliederungsprinzip der Weltgeschichte erhob. Anschließend stehen die drei klassischen, von Pyrrhon, Polybios bzw. Ptolemaios entwickelten [Epoché]-Konzepte sowie deren Auftauchen und Rezeption im lateinischen Europa im Fokus. Sodann wird die erstaunlich spät, nämlich erst nach Mitte des 16. Jahrhunderts einsetzende Transformation der [Epoché] zur fundamentalen historiographischen Ordnungskategorie thematisiert. Schließlich verfolgen wir anhand zahlreicher Autoren sowie der kontemporären Lexikographie ihren auf Latein wie in den relevanten europäischen [Volksprachen] (Englisch, Französisch, Deutsch, Spanisch, Portugiesisch, Italienisch) stattfindenden Divulgationsprozeß. Dabei erweist sich der Ausgang des 17. Jahrhunderts erneut als Wasserscheide. Der erste Band endet deshalb an dieser Stelle, der zweite wird dann die weitere Entwicklung von 1700 bis zur Gegenwart analysieren. This is the first part of a two-volume study of the genesis of our modern-day system of epochs, which claims to structure the chronology of the entire history of mankind. The volume sets out by sketching the intellectual premises. It leads from the rudimentary Palaeolithic division of time via the oldest attempts at structuring to have been documented in written form, through to the Sumerian and Egyptian [King Lists], to Greek and Roman authors, to Petrarch, Bruni, and Vasari, and finally to Cellarius, who in the late 17th century introduced the distinction between the three epochs of [Antiquity, the Middle Ages and the Modern Era] as the basic chronological principle of organising the history of the world. This is followed by a closer look at the three classical concepts of [Epoché] as defined by Pyrrhon, Polybios and Ptolemaios, respectively, as well as their surfacing and reception in Latin Europe. Not until the second half of the 16th century, which is an astonishingly late point in time, can the transformation of [Epoché] into a fundamental category of historiographic structuring be detected. Finally, by studying numerous writers as well as the contemporary lexicography, we will outline the

process of divulgation that took place both in Latin as well as in the relevant European "vernaculars" (English, French, German, Spanish, Portuguese, Italian). In the process, the late 17th century again proves to be a kind of divide. As a consequence, volume one ends here; a second volume (forthc.) will analyse the further development to the present day.

**Calendars of India** Dr Vinod K. Mishra 2020-01-01 Calendars are created by civilisations to give meaning to the continuous flow of time according to their world-views. Over the past millennia, India has developed its own unique collection of many calendars for regulating its religious and cultural life. The current book presents a comprehensive account of their structure and relative importance at the present time and places them in the context of other calendars prevalent outside India. Suggestions have also been made for making some changes to bring them in line with our current astronomical knowledge. This book will be very useful to students and anyone who is curious about calendars.

**Sun, Moon, and Sothis** Lynn E. Rose 1999 The Ancient Egyptian Calendar followed the movements of the star Sothis (Sirius) as well as the sun. This book discusses how the Egyptians divided time, and then turns to a detailed examination of how Egyptian lunar calendars were tied by succeeding astronomers into the Julian Calendar, and thus into our own calendrical reckonings. The author suggests that a mistake in ancient calculations may mean a substantial error in our dating of the Middle Kingdom, meaning that it may be a much later period than commonly assumed.

**Calendars in Antiquity** Sacha Stern 2012-09-06 Calendars were at the heart of ancient culture and society, and were far more than just technical, time-keeping devices. Calendars in Antiquity offers a comprehensive study of the calendars of ancient Mesopotamia, Egypt, Persia, Greece, Rome, Gaul, and all other parts of the Mediterranean and the Near East, from the origins up to and including Jewish and Christian calendars in late Antiquity. In this volume, Stern sheds light on the political context in which ancient calendars were designed and managed. Set and controlled by political rulers, calendars served as expressions of political power, as mechanisms of social control, and sometimes as assertions of political independence, or even of sub-culture and dissidence. While ancient calendars varied widely, they all shared a common history, evolving on the whole from flexible, lunar calendars to fixed, solar schemes. The Egyptian calendar played an important role in this process, leading most notably to the institution of the Julian calendar in Rome, the forerunner of our modern Gregorian calendar. Stern argues that this common, evolutionary trajectory was not the result of scientific or technical progress. It was rather the result of major political and social changes that transformed the ancient world, with the formation of the great Near Eastern empires and then the Hellenistic and Roman Empires from the first millennium BC to late Antiquity. The institution of standard, fixed calendars served the administrative needs of these great empires but also contributed to their cultural cohesion.

**The Dawn of Astronomy** J. Norman Lockyer 2006-04-28 A pioneer in the fields of astrophysics and astro-archeology, J. Norman Lockyer believed that ancient Egyptian monuments were constructed "in strict relation to the stars." In this celebrated study, he explores the relationship between astronomy and architecture in the age of the pharaohs. Lockyer addresses one of the many points already extensively investigated by Egyptologists: the chronology of the kings of Egypt. All experts are in accord regarding the identity of the first monarch, but they cannot agree upon the dates of his reign within a thousand years. The author contends that by applying a knowledge of astronomy to the actual site orientation of the region's pyramids and temples, accurate dating can be achieved. In order to accomplish this, Lockyer had to determine the level of the ancient Egyptian ideas of astronomy. Some of his inferences have been invalidated by subsequent scholarship, but many of his other conclusions stand firm and continue to provide sensational leads into contemporary understanding of archaic astronomy.
