The Geology and Petrology of the Great Serpentine Belt of New South Wales William Noël Benson 1913

Petrology of Lamproites Roger H. Mitchell 2012-12-06 In this book, the first dedicated entirely to the petrology of lamproites and their relationships to other potassium-rich rocks, the objective of the authors is to provide a comprehensive critical review of the occurrence, mineralogy, geochemistry, and petrogenesis of the clan. Although lamproites represent one of the rarest of all rock types, they are both economically and scientifically important and we believe the time is ripe for a review of the advances made in their petrology over the past two decades. Many of these advances stem from the recognition of diamond-bearing lamproites in Western Australia and the reclassification of several anomalous diamond-bearing kim berlites as lamproites. Consequently lamproites, previously of interest only to a small number of mineralogists specializing in exotica outside the mainstream of igneous petrol ogy, have become prime targets for diamond exploration on a worldwide basis. Contemporaneously with these developments, petrologists realized that lamproites possess isotopic signatures

complementary to those of midoceanic ridge basalts, alkali basalts, kimberlites, and other mantle-derived melts. These isotopic studies provided new insights into the long-term development of the mantle by suggesting that the source regions of lamproites were metasomatically enriched in light rare earth and other incompatible elements up to 1-2 Ga prior to the melting events leading to generation of the magma.

Geology of Norway Olaf Holtedahl 1960

Lamprophyres N. M. S. Rock 2013-11-11 Following their recognition by GÜmbel (1874), lamprophyres were treated for an entire century as little

more than obscure curiosities. Although this situation has changed recently, with a flowering of publications and active workers, lamprophyres remain almost the only group of igneous rocks which have not yet received attention in a dedicated monograph. In five exploratory reviews (1977-1987), the writer aimed to set out what was known about these rocks. The IUGS Subcommittee on igneous rock systematics had meanwhile presented its nomenclatural framework (Streckeisen 1979). All this has now been overtaken by a recent explosion of interest, epitomized not least by lamprophyres' greater prominence in the 4th International Kimberlite Conference Proceedings. More data have become available since 1985 than over the entire previous century, and it is obviously impossible for such an extraordinary outpouring to be fully reviewed in this first, preliminary book. At the risk of dissatisfying some readers, therefore, this book concentrates on factual matters, and on a broad overview rather than minutiae. Because not even a world map of known lamprophyres was previously available, almost half the book is deliberately taken up by the first global lamprophyre compilation, and its commensurately extensive Bibliography. Such a compendium of largely objective information is believed to be of more immediate interest and lasting value than a premature pottage of petrogenetic polemic. Chapters 1-7 bring previous studies up to date, and concentrate on factual information.

The Principles of PETROLOGY G.W. Tyrrell 2012-12-06 N this book the task of summarising modern petrology I from the genetic standpoint has been attempted. The scale of the work is small as compared with the magnitude of its subject, but it is nevertheless believed that the field has

been reasonably covered. In conformity with the genetic viewpoint petrology, as contrasted with petrography, has been emphasised throughout; and purely descriptive mineralogical and petrographical detail has been omitted. Every petrologist who reads this book will recognise the author's indebtedness to Dr. A. Harker and Dr. A. Holmes, among British workers; to Prof. R. A. Daly, Dr. H. S. Washington, and Dr. N. L. Bowen, among American petrologists; and to Prof. J. H. L. Vogt, Prof. V. M. Goldschmidt, Prof. A. Lacroix, and Prof. P. Niggli, among European investigators. The emphasis laid on modern views, and the relative poverty of references to the works of the older generation of petrologists, does not imply any disrespect of the latter. It is due to recognition of the desirability of affording the petrological student a newer and wider range of reading references than is usually supplied in this class of work; for references tend to become stereotyped as well as text and illustrations. Furthermore it is believed that all that is good and living in the older work has been incorporated, consciously or unconsciously, in the newer.

Antarctic Earth Science R. L. Oliver 1983 The fourth international symposium on Antarctic Earth Sciences took place in Adelaide, South Australia during the week 16-20 August 1982. This volume contains a

record of the centenary activities celebrating Sir Douglas Mawson and the one hundred and seventy-four papers that were presented by delegates for discussion over the five days. Sir Douglas Mawson was part of the first team to reach the magnetic South Pole, a leading geologist and scientific figure during the heroic age of antarctic exploration. The papers presented during the symposium were divided into fifteen categories covering east and west Antarctica, marine, land and glacial geology, plate tectonics, islands, peninsulas, climatic change and Precambrian and Cenozoic era activity. The two hundred persons from sixteen countries who attended the symposium brought together a wide range of the most current expertise and research to share, of which this volume provides a record.

A Folk Divided Hildor Arnold Barton 1994 "What happens to a people ... when it becomes divided and separated through a great overseas migration? ... how do the two parts of such a divided people relate to each other? What ideas do they have regarding each other as the process continues and as time and circumstance cause them to develop in separate ways of their own? The purpose of this book is to seek answers to such questions in the case of the Swedes during the period of their great migration, between roughly 1840 and 1940." -- Pref.

Fin(s) de Siècle in Scandinavian Perspective Faith Ingwersen 1993 Essays focusing on the artistic innovations of Scandinavian fin de siècles. This collection of essays by eminent Scandinavists focusses on works and artistic movements prominent towards the ends of the last four centuries. The last decade of each century has seen amazing innovations in Scandinavian arts, especially in literature: the flowering of genres in national languages in the 1600s, the bawdy rococo voice of Carl Michael Bellman in the 1700s, the rise of Scandinavian drama with August Strindberg and Henrik Ibsen and the neoromanticism of the premodernistic novels of Hamsun. Each essay is a study from the unique

perspective of one of the field's foremost European or American scholars and is inspired by the Renaissance interests of the Norwegian scholar Harlad S. Naess. The collection as a whole contributes to the creation of a modern, multilayered view of the beginnings and endings of the seventeenth-, eighteenth-, nineteenth- and twentieth-century worlds in Scandinavia and Scandinavian America.

It also contributes to a significantly more multi-faceted view of Norwegian and, indeed, European international migration by focusing attention on an East coast community that developed primarily through the irregular, often illegal immigration of merchant seamen.
