Environmental History in the Pacific World J.R. McNeill 2022-03-01 This volume brings together a set of key articles from the last 30 years pertaining to the environmental history of the Pacific basin. It aims to treat the islands and waters of the Pacific as well as the lands around the Rim, from New Zealand to Japan, to California, to Chile, and is the first work of environmental history to take this inclusive view of the Pacific basin. The focus is mainly on recent centuries but, as environmental history requires, at times the work also takes the very long view of millennia. Several of the articles seek to bring a broad Pacific perspective to bear on their subjects, while others use Pacific-basin examples to try to establish broader theoretical points of interest to all who are drawn to the study of the interactions between nature and culture. The book includes a bibliography of Pacific-basin environmental history and an introduction that aims to sketch the contours and possible future directions of the field.

The Face of the Earth: Environment and World History J. Donald Hughes 2015-05-11 Although the organizing principle of virtually every world history text is "development", the editor of this volume maintains that this traditional approach fails to address the issue of sustainability. By adopting the ecological process as their major theme, the authors show how the process of human interaction with the natural environment unfolded in the past, and offer perspective on the ecological crises in our world at the beginning of the 21st century. Topics range from broad regional studies that examine important aspects of the global environment that affect nations, to a study of the widespread influence of one important individual on his nation and beyond. The authors take different approaches, but all share the conviction that world history must take ecological process seriously, and they all recognize the ways in which the living and non-living systems of the earth have influenced the course of human affairs.

Environmental Politics in Japan Jeffrey Broadbent 1999-07-28 After World War Two, Japan attained economic growth but suffered environmental disaster. In response to massive protest in the 1960s and 1970s, the Japanese government rapidly reduced the worst air and water pollution. Jeffrey Broadbent's case study of industrial growth and pollution in a rural Japanese prefecture explains this response while testing political, social movement and environmental theory. The state, conservative political party and big business pushed rampant growth until movements posed a political and disruptive challenge. Then, the elites passed some pollution control, but also demobilized local protest, quashed discontent, and prevented

the formation of national environmental groups. Without the protest threat, business stymied other government pollution-control plans. The interaction of material, institutional and cultural factors, especially informal institutions, explained the dominance of actors and the pattern of outcomes. Through this syncretic lens in a non-Western setting, this study refines our theories of the state, protest movements, political process, and environmental problems.

The Clinton Riddle Todd G. Shields 2004-01-01 In 2002 a distinguished interdisciplinary group of scholars gathered at the Diane D. Blair Center of Southern Politics and Society at the University of Arkansas to provide a critical evaluation of the Clinton-Gore administration. Their groundbreaking assessment of the most controversial president in modern times treats such crucial topics as race, women, and minorities; the character issue; foreign policy; and the media. This book provides a unique vantage point on the "Clinton riddle" that all future studies will need to consider.

How the Japanese Became Foreign to Themselves Patrick Hein 2009 The question of whether Arendt's distinction of the private, public and society can be applied to the Japanese cultural context will be examined. It will be argued that repressed needs for equality, plurality and independence have made their way back through increased civil political participation and that this process is driven by the renaissance of the pre-Meiji Samurai principle of ethical individualism.

World Economy and Its Main Development Tendencies J. Nyilas 2013-06-29 A great many socio-economic events of the utmost importance have taken place in rapid succession in the historically short period of hardly more than three decades. After the Second World War the pace of socio-economic progress has experienced an unprecedented acceleration. This is nothing new in itself. Social formations and the corresponding productive forces prior w socialism had also followed each other at a rapidly increasing rate. Acceleration can also be witnessed in the accumulation of human knowledge, in the fields of science and technology. Parallel with the development of the productive forces, the growth of population has been exponential. More than one and a half thousand years were needed for the world population to double since the beginning of our era, whereas it takes now less than 40 years. The emergence of capitalism, the appearance of mechanized mass production brought about a radical change in the general progress of human civilization. It opened up the machine age. The classics of Marxism highly appreciated the new power and labour machines and the resulting growth in production, and stated that the productive forces created under capitalism had far surpassed those brought about by all earlier societies taken together. This is true even though the technology of that time looked upon in hindsight had produced hardly more than primitive steam engines and simple labour machines which have by now become, for the most part, relics of technical history.

The Quest For A Just World Order Samuel S Kim 2019-07-11 In response to a growing sense of

dissatisfaction with the state of the world and the state of international relations research, Professor Kim has taken an alternative approach to the study of contemporary world politics. Specifically, he has adopted and expanded the cross-cultural, interdisciplinary, and transnational approach developed by the World Order Models Project (WOMP), an enterprise committed to the realization of peace, economic equality and well-being, social justice, and ecological balance. Systemic in scope and interdisciplinary in methodology, *The Quest for a Just World Order* explains and projects the issues, patterns, and trends of world politics, giving special attention to the attitudinal, normative, behavioral, and institutional problems involved in the politics of system transformation. Professor Kim also attempts to remedy a number of problematic features of traditional approaches, including a value-neutral orientation; fragmentation and overspecialization; overemphasis on national actors, the superpowers, and stability; and the Hobbesian image of world politics. Part 1 presents a conceptual framework for developing a normative theory of world order. Each of the four chapters in Part 2 examines a specific global crisis in depth, working within the framework laid out in Part 1. In Part 3 a variety of desirable and feasible transition strategies are proposed, and Professor Kim assesses the prospects for achieving a just and humane world order system by the end of this century.

Indian Ocean and Maritime Security Bimal N. Patel 2016-11-03 This book provides a synoptic view of the Indian Ocean and maritime security in its contested waters. Using a historical approach, it reveals vital links to events in the present day. The volume: Highlights the competition between major Asian powers to control the 'String of Pearls' — a reference to the Chinese attempts at controlling the Indian Ocean periphery. Shows that cooperation amongst the major powers of the region could abate the threat of the potential of conflict becoming global and inviting external intervention. Discusses India's Look-East policy and the deepening relation between India and the Association of Southeast Asian Nations (ASEAN). Argues for the need of Indian Ocean states and particularly the South Asian Association for Regional Cooperation (SAARC) members of the Indian Ocean Rim Association (IORA) to look afresh at their political and security issues and common interests. Suggests measures for evolving a robust mechanism of maintaining the Indian Ocean as a sustainable zone of commerce, energy, security and peace rather than threat. A major contribution on a critical area in Asian geopolitics, this volume will be useful to scholars and researchers of international relations, politics, defence studies and maritime security studies, along with strategic affairs experts and think tanks.

The Global 2000 Report to the President of the U.S. Gerald O. Barney 2013-09-24 The Global 2000 Report to the President of the U.S. presents an interagency report of the 70-year record of Government concern relating to issues in population, resources, and environment. It discusses the interrelatedness of these three factors. It addresses all three topics from a relatively long-term, global perspective and emphasizes interconnections and feedback. Some of the topics covered in the book are the projections of the population, climate, technology, and the food and agriculture. The analysis of these projections is covered. The tools used in the analysis are discussed. The text defines the meaning of mesarovic-pestel world model, carrying capacity, stability, diversity, and ecological buffering. A comparison of the resulting projections is presented. A chapter of the volume is devoted to the embassy reports on forestry and agricultural trends. Another section of the book focuses on the Latin American world model. The book will provide useful information to economists, political analysts, students and researchers.

Global Trends 2040 National Intelligence Council 2021-03 "The ongoing COVID-19 pandemic marks the

most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) *Global Trends 2040-A More Contested World* (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

Economic Interdependence and War Dale C. Copeland 2014-11-02 Does growing economic interdependence among great powers increase or decrease the chance of conflict and war? Liberals argue that the benefits of trade give states an incentive to stay peaceful. Realists contend that trade compels states to struggle for vital raw materials and markets. Moving beyond the stale liberal-realist debate, *Economic Interdependence and War* lays out a dynamic theory of expectations that shows under what specific conditions interstate commerce will reduce or heighten the risk of conflict between nations. Taking a broad look at cases spanning two centuries, from the Napoleonic and Crimean wars to the more recent Cold War crises, Dale Copeland demonstrates that when leaders have positive expectations of the future trade environment, they want to remain at peace in order to secure the economic benefits that enhance long-term power. When, however, these expectations turn negative, leaders are likely to fear a loss of access to raw materials and markets, giving them more incentive to initiate crises to protect their commercial interests. The theory of trade expectations holds important implications for the understanding of Sino-American relations since 1985 and for the direction these relations will likely take over the next two decades. *Economic Interdependence and War* offers sweeping new insights into historical and contemporary global politics and the actual nature of democratic versus economic peace.

Head to Head Lester C. Thurow 1992 In his new book, the highly acclaimed author of the bestselling *The Zero Sum Society* and *The Zero Sum Solution* evaluates America's position in the coming world order. Thurow contends that there will be a major economic battle among Japan, Europe, and America, and he evaluates the chances of each of surviving the competition.

Ecological Modernisation and Japan Brendan F.D. Barrett 2005-04-28 In the 1990s, Japan gradually began to turn green and started to experiment with more participatory forms of environmental governance. *Ecological Modernisation and Japan* explores this transformation and looks at Japan as a case for ecological modernisation while contextualising the discussion within its unique history and recent discussions about globalisation and sustainability. It makes a significant contribution to the ecological modernisation debate by unpacking the Japanese environmental experience.

Handbook of Bureaucracy Ali Farazmand 1994-06-10 This encyclopedic reference/text provides an analysis of the basic issues and major aspects of bureaucracy, bureaucratic politics and administrative theory, public policy, and public administration in historical and contemporary perspectives. Examining theoretical, philosophical, and empirical interpretations, as well as the intricate position of bureaucracy in government, politics, national development, international relations, and a host of other institutions, the book focuses on the multifunctional role of public bureaucracies in societies with various socioeconomic, political, cultural, and ideological orientations and covers a wide range of processes and subjects.

The Environment And Marxism-leninism Joan Debardeleben 2019-07-11 In the past two decades, environmental pollution and natural resource shortages have evoked increasing concern in the Soviet Union and Eastern Europe. The emerging ecological crisis has challenged many common assumptions in the Soviet bloc, as in the West. This book provides, for the first time, a detailed and comprehensive analysis of the ecology debate in the USSR and its highly industrialized ally, the German Democratic Republic (GDR). Based on a thorough examination of the Soviet and GDR sources, Dr. DeBardeleben explores the authorities' attempts to explain the problem to their populations. She also examines the viewpoints of scientists, writers, and scholars, with special attention to economic dimensions of the ecology debate. The study reveals the increasing sophistication of specialists in influencing public policy by adapting official values to support their positions. Through comparison of the Soviet and East German cases, the study clarifies the impact of natural resource endowment and legitimacy dilemmas on treatment of the ecology issue. The book demonstrates that Marxist-Leninist values subtly affect Soviet and GDR responses, but at the same time the environmental crisis is forcing a reevaluation of some aspects of Marxist-Leninist theory and ideology itself.

Social Science Research and Climate Change R.S. Chen 1983-06-30 This volume presents the findings of a small group of both social and natural scientists who tackled the 'so what' question. Led by Dartmouth sociologist, Elise Boulding, and Boulder climatologist, Stephen Schneider, the group examined how a changing climate might affect people and institutions and how these might respond. The outcome of their interdisciplinary appraisal is a blend of careful reviews of relevant social-science work, group interaction and discussion, and concrete suggestions for further research and analysis.

The Rise and Fall of the Great Powers Paul Kennedy 2010-10-27 About national and international power in the "modern" or Post Renaissance period. Explains how the various powers have risen and fallen over the 5 centuries since the formation of the "new monarchies" in W. Europe.

Animals and Human Society Aubrey Manning 2002-11 Modern society is beginning to re-examine its whole relationship with animals and the natural world. Until recently issues such as animal welfare and environmental protection were considered the domain of small, idealistic minorities. Now, these issues attract vast numbers of articulate supporters who collectively exercise considerable political muscle. Animals, both wild and domestic, form the primary focus of concern in this often acrimonious debate. Yet why do animals evoke such strong and contradictory emotions in people - and do our western attitudes have anything in common with those of other societies and cultures? Bringing together a range of contributions from distinguished experts in the field, *Animals and Society* explores the importance of animals in society from social, historical and cross-cultural perspectives.

Japan's Security Agenda Christopher W. Hughes 2004 Long constrained as a security actor by constitutional as well as external factors, Japan now increasingly is called to play a greater role in stabilizing both the Asia-Pacific region and the entire international system. *Japan's Security Agenda* explores the country's diplomatic, political, military, and economic concerns and policies within this new context.

The Internationalization of Environmental Protection Miranda A. Schreurs 1997-10-02 Exploring the intersection of the 'domestic' and the 'international' in environmental politics, this book presents seven original case studies which show how the internationalization of environmental protection efforts is altering policy-making processes, policy outcomes, and the effectiveness of policy implementation. The authors argue that while new norms and institutions for the global environment are emerging which are changing policy-making processes at the national and regional levels, sub-state politics continues to influence strongly the nature of national responses to international environmental problems. The volume examines climate change politics in China, Japan, and Germany; ozone layer protection in the United States, United Kingdom, Japan, and Germany; East-West environmental cooperation and the former Soviet Union; Zimbabwe and the Convention on International Trade in Endangered Species; biodiversity politics in the United States and United Kingdom; and environmental protection within the European Union.

Sectors of Mutual Benefit in U.S.-Soviet Relations Nish Jamgotch 1985 A distinguished panel of analysts examines particular areas of U.S.-Soviet cooperation: crisis communications, trade, science, agriculture, environment protection, space and medicine. The authors analyze agreements that the United States and the Soviet Union have revolved in their mutual interest, agreements that all too often are overlooked in an atmosphere clouded by hostility and mutual distrust. What, they ask, has been the history of these agreements? Have they succeeded or failed? How might they best be sustained and enlarged? Without minimizing the enormous dangers of ongoing strategic military competition, the contributors attempt to determine which sectors of U.S.-Soviet relations have yielded the most significant mutual benefits. They raise questions about where U.S. policy has gone wrong, where it has been effective, and how safe we are in forecasting the continuation of those cooperative relationships.
